This listing of claims will replace all prior versions, and listings, of claims in the application.

## **Listing of Claims:**

- 1. (Original) A method of connecting a mobile host to an access network with an intelligent device connected to the mobile host, comprising the steps of:
- (a) receiving a host configuration request message from the mobile host using a host configuration protocol;
  - (b) sending an access request to the access network;
- (c) receiving a response to the access request from the access network with an IP address for the mobile host;
- (d) selecting an IP address in the same subnet as the IP address for the mobile host; and
- (e) sending a reply message to the mobile host with the selected IP address as the source IP address and the IP address for the mobile host as the destination IP address.
- 2. (Currently Amended) A method of connecting a mobile host to access an access network with an intelligent device connected to the mobile host, comprising the steps of:
  - (a) receiving a DHCP\_DISCOVER message from the mobile host;
  - (b) sending an access request to the access network;
- (c) receiving a response to the access request from the access network with an IP address for the mobile host;
- (d) selecting an IP address in the same subnet as the IP address for the mobile host;
  - (d) (e) sending a DHCP\_OFFER message to the mobile host;
  - (e) (f) receiving a DHCP\_REQUEST message from the mobile host; and
  - (f) (g) sending a DHCP\_REQUEST message to the mobile host.
- 3. (Original) The method of claim 1, wherein the DHCP\_DISCOVER message is packaged into an Ethernet frame with a first MAC address as a source MAC address and an Ethernet broadcast address.

- 4. (Original) The method of claim 2, wherein the DHCP\_OFFER message is packaged into an Ethernet frame with a second MAC address as a source MAC address and said first MAC address as a destination MAC address.
- 5. (Currently Amended) A method of disconnecting a mobile host from an access network with an intelligent device connected to the mobile host, comprising the steps of:
  - (a) receiving a DHCP\_RELEASE message from the mobile host;
  - (b) sending a disconnect request message to the access network; and
  - (c) receiving a disconnect response message from the access network.
- 6. (Original) The method of claim 4, wherein said DHCP\_RELEASE message contains a destination IP address selected by the logical device, said destination IP address being on the same subnet as the IP address allocated to the mobile host.
- 7. (Currently Amended) A method of connecting a mobile host to a service provider's network, through a CPDP network or a WLAN, with an intelligent device connected to the mobile host, comprising the steps of:
  - (a) receiving a DHCP\_DISCOVER message from the mobile host;
  - (b) sending an access request to the WLAN;
- (c) receiving a response from the WLAN with an IP address for the mobile host on the WLAN;
  - (d) sending an access request to the service provider's network;
- (e) receiving a response from the service provider's network with an IP address for the mobile host on the service provider's network;
- (d) (f) selecting an IP address in the same subnet as the IP address for the mobile host;
  - (e) (g) sending a DHCP\_OFFER message to the mobile host;
  - (f) (h) receiving a DHCP\_REQUEST message from the mobile host; and
  - (g) (i) sending a DHCP ACKNOWLEDGE message to the mobile host.

- 8. (Currently Amended) A method of routing IP packets from a mobile host to a target host on a WLAN with an intelligent device connected to the mobile host, comprising the steps of;
- (a) receiving an ARP request message with a destination IP address of the target host;
- (b) sending a fake ARP reply message with said destination IP address of the target host corresponding to a MAC address of the intelligent device;
- (c) receiving an IP packet encapsulated in an Ethernet frame from the mobile host; and
- (d) sending an IP-in-IP packet encapsulated in a WLAN frame to an access point on the WLAN.
- 9. (Original) The method of claim 8, wherein said IP-in-IP packet encapsulated in said WLAN frame of step (c) is of the form [MAC<sub>NIC</sub>, MAC<sub>AP</sub> [IP<sub>MH@AN</sub>, IP<sub>RAS@ON</sub> [IP<sub>MH@ON</sub>, IP<sub>DST@ON</sub>, IP PAYLOAD]]], wherein MAC<sub>NIC</sub> is the MAC of the WLAN interface, MAC<sub>AP</sub> is the MAC of the access point, IP<sub>MH@AN</sub> is the IP address of the mobile host on the access network, IP<sub>RAS@ON</sub> is the IP address of the RAS on the WLAN, IP<sub>MH@ON</sub> is the IP address of the mobile host on the WLAN, and IP<sub>DST@ON</sub> is the IP address of the target host on the WLAN.
